

ADDRESSING

LAKE MEAD WATER LEVELS

With Lake Mead's rapidly receding water levels presenting a stark reality in our backyard, Nevada is acting now to take care of our state and its citizens. Through aggressive conservation efforts and infrastructure, we are well positioned to continue accessing our Colorado River allocation — keeping Southern Nevada one of the most water secure desert communities in the world.

WHAT WE'RE DOING TO CONSERVE WATER

Assembly Bill 356

Requires the removal of nonfunctional turf by 2027 which will save this community billions of gallons in irrigation water each year.

Reducing water consumption in multiple sectors:

- Golf courses
- Landscaping
- Development and cooling
- Septic systems
- Pools

HOW SOUTHERN NEVADANS CAN HELP

- ✓ Follow the mandatory watering schedule and reduce watering on September 1 to your three assigned watering days.
- ✓ Replace nonfunctional grass now while rebate dollars are available.
- ✓ Report water waste when you see it to your local utility.

Visit [SNWA.com](https://www.snwa.com) to find conservation rebates and learn more about new development restrictions that might affect you.
